

Kent Marine Turbo Strontium

Product Description:

TURBO STRONTIUM provides bio-available strontium for lush growth of purple, pink and green calcareous algae, snails, hard tube worms and clams. Corals will open more and stay attached to their skeletons better, with regular use. Phosphate & nitrate free! Contains no gluconates, EDTA, or other organics to raise DOC levels, as many competing products do. This product is the main ingredient in other strontium supplements in economical dry form! For best results, Use Kent Kalkwasser Mix, Concentrated Liquid Calcium, or TURBO CALCIUM also.

Directions:
Make a 10% (by weight) stock solution by mixing 10 grams of TURBO STRONTIUM powder with 100 milliliters of reverse osmosis or deionized water . (Assistance in measurement, 10 grams is about 3/4's of a tablespoon, 100 milliliters is 3 1/3 oz. or about a half a cup) Add 1/2 teaspoon (2.5 ml) of this stock solution per 50 gallons (180 liters) of aquarium water, every week. (Daily addition is always more beneficial, so one-seventh of this amount can be added daily). Strontium is the second most important additive to the reef aquarium (calcium being the most important). Adding more than the recommended amount of TURBO STRONTIUM is generally very safe and can be beneficial in many cases, particularly when you have heavy animal loads. If you decide to increase the dosage, just read the cautions below, and cut back should any adverse reactions be noticed.

Available Size: 150g, 300g & 4800g
