Dymax pH electrode

Â Â Dymax chemical sensor has been manufactured with the greatest care and observation of all technical regulations. The material used is subjected to continuous quality control. Each sensor must pass through a stringent test on a computerized inspection unit before leaving the factory. With its excellence quality, the sensor is commonly use in the laboratory, farms, chemical industry and aquarium etc.

Measurement range: 0~14pH (Temp 0~70 degree celsius)
Responsive: Within 5 seconds. Stability and resisting interference.
Durability (probe and lens) materials.
Apply to all low-conductivity water (>0.1u/cm)
