Kent Marine Lugol's Solution

Â Product Description:
Kent Lugol's Solution provides a strong source of free iodine and iodide to reef inhabitants and macroalgae. Although itâ€™s very effective when used with stony corals, systems containing xenia and soft corals are particularly benefited by the use of Lugol's Solution. Used as a dip for stony and soft or leather corals, Lugol's will help rid the animals of unwanted parasites and harmful bacteria. This product helps foster improved coloration and prevents bleaching of all corals due to changes in light intensity, and enhances coral polyp expansion. Kent Lugol's Solution provides a key nutrient for marine invertebrates and fishes, and contains no phosphate, nitrate, gluconate, or other sugars.Directions:
Lugol's Solution is VERY strong, and must not be overdosed! Add 1 drop per 25 gallons aquarium capacity weekly to sump or an area of high water flow. Can also be diluted in one cup of aquarium water and administered directly over xenia colonies or soft corals with rigid tubing or a pipette. Do not mix with other supplements outside the aquarium. To use as a dip for corals, in a separate bucket add 40 drops Lugol's Solution to 1 gallon aquarium water, and immerse coral for 10-15 minutes.Available Sizes: 1oz
