Kent Marine Liquid Calcium

Â Product Description:
Concentrated Liquid Calcium provides bio-available calcium for lush growth of purple, pink and green calcareous algaes, snails, hard tube worms and clams. Corals will open more and stay attached to their skeletons better, with regular use. Phosphate & nitrate free! Contains no gluconates, EDTA, or other organics to raise DOC levels, as many competing products do. Concentrated Liquid Calcium alone can provide all the calcium your reef will need, but for maximum results, use Kent Kalkwasser Mix first, then raise calcium level with this product. Strontium addition via use of Kent Marine Strontium & Molybdenum Supplement is absolutely necessary. Use of Coralâ€¢Vite, and Essential Elements are beneficial, as well. Directions:
Add 1/4 to 1 teaspoon (1/4 to 1 capful or 1.25 to 5 ml) per 50 gallons (190 l) of tank capacity each day, based on animal load. Since animals use calcium, and gallons do not, regular testing of calcium level by a good calcium test kit (HachTM brand is recommended) is advised. Adjust amount of addition of the product to achieve a calcium level of about 400 mg/l. A higher level may result in rapid calcium compound precipitation and deposits which can possibly be destructive to pumps and other sensitive system equipment. It is recommended that you regularly check impellers and other delicate equipment for calcium deposits if you run higher (above 400 mg/l) system calcium levels! For best results adjust system KH to 8 to 10 dKH with Superbuffer-dKH or Marine Aquarium pHâ€¢Buffer.Available Size: 4 oz, 8 oz, 16 oz, 64 oz & 5 gallon
