Kent Marine Reef Carnivore

Product Description:
Reef Carnivore is a diet created for fishes that consume shrimp, crabs, insects, other invertebrates, and other fishes in the wild. Percentages of protein, fat, fiber, and ash have been found to be optimal for these "high-performance" species.
- Does not overload fishâ€™s liver with fat.
- Sources of protein are "natural" to fish, which means they have developed the enzymes to properly utilize these proteins; fish cannot properly process proteins derived from land animals.
- Fiber keeps digestive tract in good working order. Directions:
Feed 1 to 3 times daily. Do not feed more than can be eaten in a 5 minute period. Do not overfeed. If fed properly, no clouding should occur.Available Sizes: Small & Medium Pellet, 1.5 & 5 oz
