

Dymax OB Lighting

Product Description

The OB Lighting has a unique feature of hidden electronic ballast on both side of the aluminum casing. The slim and tiny ballast is covered by a high reflective stainless steel reflector that made it invisible and provides a non-low light area as the light tube is placed from extreme right to left side of the light casing. The tiny ballast also provides the whole light set with a slim and aerodynamic outlook but most of all, light in weight. The light is constructed with a twin T5 tube. The T5 tube has a capability of penetrating deep water spectrum with the lowest heat radiation and energy consume. The OB light has developed and provides a world class aquarium lighting for its innovation. Size Available 1ft (Black) , 2ft, 3ft and 4ft
