

Marc Weiss Coral Soft Coral Grow

Â Product Description:

Soft Coral Grow provides a bio-film that adheres to and enhances the coral's mucus layer. This bio-film provides an enhanced environment for increased bacterioplankton colonization allowing soft corals and polyps to feed them-selves more efficiently. Feeding with coral foods may become unnecessary. This eliminates pollution caused by excess food. The use of the appropriate trace elements and water conditioners should be continued. Soft Coral Grow is a natural cultured detrital aggregate and algal colloids with no biocidal preservatives, as are needed in liquid coral foods. Results are usually seen within two weeks.Â

Available Size: 6 oz
