

Two Little Fishies PhosBan Reactor

Â Product Description:

The PhosBan Reactor 150 is designed with the upflow principle to achieve the most efficient use of PhosBanÂ® or other chemical filter media. By pushing water from the bottom upward through a dispersion plate, it forces an even distribution of water through the media, and prevents channeling. It can be mounted hanging on the back of the aquarium or below the aquarium. Hose barb connections are for 1/2 inch i.d. tubing. Includes 1/2 inch barbed ball valve for flow control, and hose clamps. Recommended flow rate is 80 to 90 gallons per hour.
