

Dymax Denitrator

- Product Description

Every normal working aquarium creates nitrates. Some of the aerobic bacteria which are in our aquariums produce nitrates, mainly provided by the distribution of feed and fish waste. Frequent change of water are often inevitable because the accumulation of nitrates can be noxious in an aquarium. Hence, it is always necessary to avoid and prevent this. The new DYMAX Denitrator provides an excellent biological denitrification effect to eliminate the nitrates through the presence of the micro-organism (bacteria) is currently one of the best fighter against the nitrates. This is both natural and efficient, even if it is a little known process, in spite of its long-standing presence in nature.

- Internal and External use
- Using corrosive free materials
- Easy to install
- Self-siphon Model Available
- Dymax Denitrator XD600: max. cap. 600litres (dia.120mm/H350mm) include pump 1200l/h
- Dymax Denitrator XD900: max. cap. 1200litres (dia.150mm/H450mm) include pump 1200l/h
