

Prodibio BioTrace

BIOTRACE contains all the microelements needed for aquarium life (selected amino acids, enzymes, natural vitamins (including riboflavin) and a natural plant surface active agent enabling better membrane absorption by cells). It also provides trace elements.

BIOTRACE is a natural product that affects cellular bioactivators. It dynamises the cellular metabolism of most of the bacteria living in fresh water aquariums and reinforces the biological reactions by increasing the number of bacteria and therefore optimising water quality.Â
