

Prodibio BioDigest

BIODIGEST is made up of natural nitrifying, nitrate reducing and facultative bacterial strains selected for their ability to convert ammonia into nitrites, nitrites into nitrates and nitrates into nitrogen. These bacteria work together with each strain finishing off the work started by the others. Some are capable of biosynthesising nitrate reducing enzymes in aerobic conditions. This enables water to be effectively purified, nitrates and phosphates to be reduced and prevents the spread of filamentous algae.

WHY SHOULD THE PRODUCT BE USED EVERY TWO WEEKS?

BIODIGEST is particularly effective in the first two weeks. The speed at which the bacteria develop differs from one strain to another. Biodigest guarantees optimal purification proportions for a fortnight.
