
XM Metal Halide Double Ended (250W – 10,000K/ 15,000K/ 20,000K)

The XM 10,000K is crisp white in color and is designed to simulate sunlight at shallow depths in the ocean. XM 10,000K lamps have the highest average par rating of any lamp on the market today.

Â

Â

The XM 15,000K is the result of extensive research and development. The 15,000K is designed to provide the correct spectrum of light without the use of actinic supplementation. This lamp alone creates a crisp blue color similar to medium depths on the coral reefs.

Â

Â The XM 20,000K is the preferred lamp of many well known coral farmers and distributors. The 20,000K produces a deep blue appearance that brings out color like no other spectrum. This lamp creates a look similar to those found on deeper levels of the coral reefs.
